EXPERIENCE SUMMARY

Scaled up soon to pick up the domain and technical knowledge and highly proactive in getting task and completing it. I have strong understanding of **Javascript** and **ES6** concepts

I am having good hold in --

Frontend: **HTML5, CSS3, JavaScript (ES6), Bootstrap4**, and basic of **Angular**.

Backend: **NodeJs, MongoDB**, Core Java, J2EE

Going forward I want to see myself as a Full Stack Web Developer(MEAN Stack) in website's development. I have completed several assessments from Topgear portal to constantly upgrade my skills on the above mentioned topics.

Description:

JavaScript is a high-level, dynamic, untyped, and interpreted programming language. It has been standardized in the ECMAScript language specification. Alongside HTML and CSS, it is one of the three core technologies of World Wide Web content production; the majority of websites employ it and it is supported by all modern Web browsers without plug-ins. JavaScript is prototype-based with first-class functions, making it a multi-paradigm language, supporting object-oriented, imperative, and functional programming styles. It has an API for working with text, arrays, dates and regular expressions, but does not include any I/O, such as networking, storage, or graphics facilities, relying for these upon the host environment in which it is embedded. Estimated Effort (Person Days): 2 Person Days. Please refer to the attached document(Javascript-scenarios.docx), for Training Details.
